

A cat jumps onto the energy storage box

Overview

When a cat prepares to jump, its muscles and tendons begin to store energy like a stretched rubber band. This is why you may see a cat crouch down low before a jump, as they are preparing to launch. Do you ever find yourself staring in amazement at how high a cat can jump?

One moment they're lounging on the couch, and the next they're perched on top of the refrigerator. It's astounding to witness their effortless movements and graceful agility. But have you ever wondered how these felines. A 3. The total kinetic energy is In which situation below is some work done?

There is one correct answer.

A cat jumps onto the energy storage box
