

# Are photovoltaic panels afraid of hail in summer

## Overview

---

The short answer is yes, hail can damage solar panels, but modern photovoltaic systems are engineered to withstand most hailstorms with remarkable resilience. The verdict?

Most panels emerged unscathed, proving that today's solar technology can take a serious beating. Hail resistance is a critical factor for solar panel durability for several reasons: Investment Protection: Solar panels represent a significant financial. Glass thickness is the critical protection factor: Research confirms that 4mm glass panels significantly outperform the standard 3.2mm thickness, with thicker glass successfully reducing or nullifying hail damage that destroys thinner alternatives. In areas that have experienced very large hail (greater than 1 3/4" or 44 mm diameter), however, hail has caused significant damage to PV modules.

### Can hail damage solar panels?

## Here's the truth

Modern solar panels are surprisingly resilient. Most can withstand golf ball-sized hail because your panels' tempered glass provides solid protection.
