

Are soft photovoltaic panels more expensive than hard panels

Overview

The price per watt tends to be higher than rigid solar panels due to materials used and manufacturing processes, averaging between \$1 to \$3 per watt. Hardware costs like panels, inverters, and racks are no longer the top driver of solar costs. With hardware representing only 25% of overall expenses, it's essential for consumers considering solar panels to understand both hard and soft costs. Getting solar panels adds up to more than just the cost of the panels themselves. Most systems cost at least \$10,000 to \$30,000. Buying options for solar panels include cash.

Are soft photovoltaic panels more expensive than hard panels

Solar Soft Costs Basics

While solar hardware costs have fallen in recent years, soft costs represent a growing share of total solar system costs. Because there are so many contributing factors, these costs can be hard to ...
