

# Are the gaps in solar photovoltaic panels sealed

## Overview

---

A 2024 SolarTech Alliance report found that unsealed gaps cause up to 18% efficiency loss in humid climates. But wait—does that mean slapping on sealant is always the answer?

Let's dig deeper. Not all sealants work for photovoltaic. Sealing the gaps between solar panels is essential for a variety of reasons, including water resistance, anti-debris, improved wind resistance, and aesthetics. You know, solar panels are built to withstand rain, right?

Well, here's the catch: micro-gaps between. Let's face it - when installing solar panels, most people worry about sunlight exposure or energy output, not rainwater sneaking through those tiny gaps between modules. This is where sealing strips come into play. These strips serve a vital role in maintaining the efficiency, durability, and longevity of solar panels by addressing the gaps.
