

# Battery continuation algorithm for communication base stations

## Overview

---

In this article, an algorithm for automatic control of energy sources was developed to improve the uninterrupted power supply of mobile communication base stations. We mainly consider the demand transfer and sleep mechanism of the base station and establish a two-stage stochastic programming model to minimize battery. Dec 7, In the communication power supply field, base station interruptions may occur due to sudden natural disasters or unstable Dec 15, Simultaneously, with the rapid deployment of communication base stations, power costs for operators are rising sharply. Based on the proposed algorithm, a simulation model was created in the Proteus program and experimental tests were conducted. The SmartRescue Base Stations, utilizing an analog home run configuration, provide a seamless means of communication between stranded individuals, rescue personnel, and offsite parties; Equipped with built-in battery backup, these base stations ensure uninterrupted communication even during power. This work studies the optimization of battery resource configurations to cope with the duration uncertainty of base station interruption.

## Battery continuation algorithm for communication base stations

### Communication Batteries: Why Telecom Base Stations Have Unique ...

The phrase "communication batteries" is often applied broadly, sometimes including handheld radios, emergency devices, or general-purpose backup batteries. In practice, when ...

 Efficient Higher Revenue

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPPT Trackers, 150% DC Input Oversizing
- Max. PV Input Current 15A, Compatible with High Power Modules

 Intelligent Simple O&M

- IP66 Protection Degree, support outdoor installation
- Smart TV Diagnostics Function, locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD, prevent lightning damage
- Battery Reverse Connection Protection

 Flexible Abundant Configuration

- Plug & Play, EPS Switching Under 30ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 Units Inverters Parallel
- \*ARC Function (Optional) when an arc fault is detected the inverter immediately stops operation

### Optimization of Communication

### Base Station Battery Configuration

For this reason, we propose a model for allocating battery resources in base stations under uncertain interruption durations, which combines the state and battery resource usage ...
