Overview

The National Development and Reform Commission (NDRC) has confirmed that projects completed after June 1 will no longer benefit from preferential rates. This decision is part of the strategy to liberalize the electricity market and aims to encourage industry players to adapt to market. China will cut export subsidies for solar panels and batteries in the coming months, a move mainly aimed at curbing domestic overcompetition and consolidating two sectors where China is dominant, said analysts who also expect it will help ease trade tensions with Europe. Authorities will cancel. BEIJING, 10 February 2025 - In a move to reshape the global renewable energy landscape, China announced that it will reduce subsidies for wind and solar projects after achieving its clean energy targets six years earlier than expected. The scale of subsidisation in China's solar sector has contributed to continued investment in production. China dominates the global solar energy (PV) supply chain with an over 80% share. The Chinese solar industry is currently losing millions of dollars a year. It is kept in business by massive financial support from the Chinese Communist government.
