

# Building photovoltaic panels on top of a fertilizer plant

## Overview

---

Agrivoltaics is an innovative approach that combines solar energy generation with agricultural land use. By installing solar panels above crops or alongside farming operations, this system allows for the dual use of land, enabling both food production and energy generation. Designs can. NREL researcher Jordan Macknick works with teams from University of Massachusetts (UMass) Clean Energy Extension and Hyperion on a photovoltaic dual-use research project at the UMass Crop Animal Research and Education Center in South Deerfield, MA. Photo by Dennis Schroeder / NREL. Under solar panels, farmers may see improved crop yields and less water. Agrivoltaics – the practice of combining solar panels with agriculture – is revolutionizing how we think about land use, offering a solution that generates clean energy while maintaining or even improving agricultural productivity. This technique is known as agrivoltaics and is growing in popularity around the globe.
