

Cameroon douala energy storage power station has been officially connected to the grid

Overview

The Port Authority of Douala is preparing to enter the operational phase of an autonomous power plant project at the Douala-Bonabéri port complex, with construction scheduled to begin in March 2026. Once completed, the facility is expected to reach a capacity of 300 megawatts, securing electricity. Discover how intelligent monitoring systems revolutionize energy storage operations in Cameroon's power sector while enhancing grid stability and operational efficiency. The 50MW/200MWh system uses lithium iron. Cameroon's economic hub, Douala, faces a critical challenge: unstable grid infrastructure limits industrial growth and household energy access. The Shared Energy. Release entered into a lease agreement with ENEO, an electricity company, in 2021 to deliver two solar hybrid and battery storage plants that have a combined capacity of 36MW solar and 20MW/19MWh of storage. The plants are located in Maroua and Guider, in the Grand-North Cameroon.
