

# Can a sulfuric acid plant be equipped with photovoltaic panels

## Overview

---

A solar thermal plant can provide the high temperatures required for the decomposition of sulphuric acid using concentrated solar radiation. The resulting products, sulphur dioxide (SO<sub>2</sub>) and water (H<sub>2</sub>O), can then be reused to obtain sulphur in a process referred to as. 0. 018 \*\* Acid decomposition temperature is 600°C. Molten salts are currently state-of-the-art for solar thermal energy storage. But elemental sulphur has more than an order of magnitude greater energy storage capacity, and is ideally suited to seasonal thermal energy storage, DLR Institute of Future Fuels research head Christian Sattler noted in a. Solar thermal plants based on sulphur production and combustion can be operated effectively, particularly in sunny regions. Together with European research partners, the German Aerospace Center. Therefore, in this study, we investigate the recovery of silver and copper from an end-of-life photovoltaic panel powder using an alternative leaching system containing sulfuric acid and ferric sulfate instead of nitric acid-based leaching systems, which are susceptible to producing hazardous gases. That's what happens when photovoltaic panels encounter sulfuric acid - an industrial tango nobody signed up for. Let's unpack this electrifying drama between clean energy and corrosive chemistr Picture this: your gleaming solar array suddenly develops mysterious pockmarks, like a teenager's. ing process involves a number of harmful chemicals. These substances, similar to those used in the general semiconductor industry, include sulfuric acid, hydrogen fluoride, hydrochloric ac terials except silver present in the solar panels. Additionally, acid mixtures such as HF/nitric acid and.

## Can a sulfuric acid plant be equipped with photovoltaic panels
