

# Can bees be raised under photovoltaic panels

## Overview

---

Solar farms have been encouraged to transform space underneath solar panels into a safe haven for bees, butterflies, and other endangered pollinators. The Biosolar system is an integrated solution for mounting photovoltaic renewable energy on green or blue roofs, providing a secure installation mechanism. Solar. ize usage of land allocat-ed for solar projects. The co-location of solar and agriculture offers opportunities for conservation, food production, in-creasing pollinator habitat, and adding additional farm reve-nue str tice of placing beehives on or near solar sites. Perhaps it sounds a little confusing, because how are bees and solar panels. Pairing solar farms with pollinator-friendly plants could be a win for both green energy and biodiversity. Such a setup could provide bees with a controlled habitat, shielding.
