

# Can factories be equipped with photovoltaic panels

## Overview

---

Solar photovoltaic (PV) systems can be installed onsite to provide renewable power to serve facility electrical loads, including industrial processes. These panels capture sunlight and generate direct current (DC). An inverter then changes DC into alternating current (AC), which runs machinery and lighting. Solar energy can help factories grow by reducing operational costs, enhancing energy security, improving sustainability, and enabling compliance with environmental regulations. SolarEdge's energy ecosystem is designed to maximize energy cost savings, seamlessly integrating PV, EV charging and storage solutions, promoting safety in combustible. Commercial and industrial solar panels are photovoltaic (PV) systems designed specifically for non-residential use.

## How can solar energy help factories to grow?

Solar PV technology has improved significantly, so not only is it possible for

solar panels to fully power a factory, but they're also much more cost-effective.
