

# Can photovoltaic panels be installed in the north and south

## Overview

---

Solar panels should face true south, not magnetic south. Use NOAA's magnetic declination calculator to find your local value and adjust accordingly. Tilt angle describes the vertical angle of your panels relative to the ground, measured in degrees from horizontal. As the sun rises in the east and sets in the west, installing panels facing either west. Here's a surprising reality: Two identical homes on the same street install the exact same solar system on the same day—identical panels, same size, same installer. The difference?

Just three degrees of panel. The optimal direction for solar panels to face is generally south in the Northern Hemisphere, as this orientation maximizes sunlight capture throughout the day, potentially increasing energy generation by up to 20%.

### Solar Panel Orientation Guide

While south-facing solar panels are generally considered ideal in North America, there are situations where other orientations may be more suitable or even necessary. For example, if your ...

### What direction should solar panels face?

Can solar panels work effectively if they don't face south? Yes, solar panels can still work effectively if they face east or west, though they may produce less

energy overall.

## Best Direction for Solar Panels to Maximize Savings -- SolarReviews

A north-facing roof is the worst direction for solar, as panels will produce around 30% less energy than if they face south. The best angle for solar panels to be

installed around 30 degrees, but it ultimately ...
