

# Canada energy storage for microgrids

## Overview

---

BESS is the fastest growing energy storage technology in Canada and is also the dominant storage technology in terms of capacity and number of sites. All but four projects proposed to be commissioned by 2030 are battery storage, with two CAES and two PHS projects also. Emerging solutions— microgrids, renewable energy technologies, and advanced battery storage systems —offer promising pathways to transform energy access in these regions while reducing greenhouse gas emissions. Clean Fuels and Canada Energy Future: How Biofuels and Hydrogen Could Reshape the Energy. The installed capacity of energy storage larger than 1 MW—and connected to the grid—in Canada may increase from 552 MW at the end of 2024 to 1,149 MW in 2030, based solely on 12 projects currently under construction 1. 9 million in federal support for the development of a state-of-the-art smart microgrid serving the communities of La. Canada's electricity grid is over 83% emission-free Around 300 Northern and remote (islanded) communities are not connected to the North American electricity grid. Canadian universities and businesses are also actively engaged in microgrid research and commercialization.
