

# Canberra Energy Storage Cabinet Production Plant

## Overview

---

The ACT Battery project, located in Australia and developed and built by its international generation subsidiary Global Power Generation (GPG), will reinforce supply quality to the city of Canberra and accelerate the energy transition in the country by allowing for greater penetration. The ACT Battery project, located in Australia and developed and built by its international generation subsidiary Global Power Generation (GPG), will reinforce supply quality to the city of Canberra and accelerate the energy transition in the country by allowing for greater penetration. The large-scale battery energy storage system (BESS) will provide at least 250 megawatts (MW) of power. This is enough energy to power one-third of Canberra for two hours during peak demand periods. The Big Canberra battery. The facility has a power of 10 MW and a storage capacity of 20 MWh, equivalent to two-hours' consumption of 3,000 households. Batteries will play a vital role in the electricity system by reinforcing grid supply quality and promoting the penetration of renewables at times of low electricity. Batteries will play a key role in the electricity system by reinforcing the quality of the grid's supply and boosting the penetration of renewables at times of low electricity production, which is a key milestone in the energy transition. Canberra Times: ground breaking ceremony, plugging in profits from a big battery. Designed for grid stability and industrial energy management, these systems are reshaping how businesses handle power storage.
