

# City Skyline Solar Power Plant

## Overview

---

The Solar Power Plant will produce 160MW at €7. From a gameplay optimization perspective there is little reason not to switch to solar power when it becomes. The solar power plant is a power-generating structure capable of generating 160 megawatts during the day and 112 megawatts during the night. It is unlocked by meeting the Grand City milestone. The solar power plant produces electricity with its large solar panels and stores power in batteries built. Off-shore wind power (Advanced Wind Turbine, Wave Power Plant) is far more efficient than land-based wind power, but must be placed on water. However, you have to build extra power plants to make up for the loss at night that during the day the solar power plant ends up producing more or less just wasted surplus power with a hefty price tag. At the start of the game you will only have access to the Wind Turbine and Coal Power Plant. What you can do in the game is to have solar power plants operate during daytime, to handle the peak usage, and have other power. So in the description it says I need to produce all electricity without using raw materials; I'd like to know what it defines as using raw materials in my games, apart from the obvious?

I have a city that uses no coal/oil nor any incinerators for electricity, but I also still have wind, water, and.
