

# Communication base station hybrid energy architecture

## Overview

---

Hybrid energy solutions enable telecom base stations to run primarily on renewable energy sources, like solar and wind, with the diesel generator as a last resort. This reduces emissions, aligns with sustainability goals, and even opens up opportunities for carbon credits or green. Abstract—This paper investigates the energy-efficient hybrid beamforming design for a multi-functional integrated sensing, communications, and powering (ISCAP) system. In this system, a base station (BS) with a hybrid analog-digital (HAD) architecture sends unified wireless signals to communicate. Enter hybrid energy systems—solutions that blend renewable energy with traditional sources to offer robust, cost-effective power. So, how exactly are hybrid systems revolutionizing energy for telecom infrastructure?

### What Are Hybrid Energy Systems?

A hybrid energy system integrates multiple energy. Aiming at this issue, an interactive hybrid control mode between energy storage and the power system under the base station sleep control strategy is delved into in this paper. Recognizing this, Mobile Network Operators are actively prioritizing EE for both network maintenance and environmental stewardship in future cellular networks. The paper aims to provide.
