

Communication base station inverter lightning protection grounding body

Overview

This Recommendation addresses the practical procedures concerning the lightning protection, earthing and bonding of radio base station (RBS) sites. Recommendation ITU-T K. This solution simplifies the complex base station ground network engineering by using the equipment method. How are base stations protected from lightning strikes?

1. Base Station. IEC 61312-1: Diversion of lightning protection equipotential systems A complete lightning current is discharged through the following paths: The magnitude of the lightning current GB50057-94 (2000 Edition) YD/T 5098-2001 Suggestion: Enter the building/station power supply B level. This includes using lightning rods, down conductors, grounding systems, surge protection devices (SPDs), and ensuring proper bonding and. The protection of GSM and base station towers from lightning and overvoltage is provided by integrating external lightning systems, internal lightning systems, earthing, equipotential bonding and LV surge arrester protection techniques within the framework of IEC-62305 standard.

Communication base station inverter lightning protection grounding

ITU-T Rec. K.112 (07/2019) Lightning protection, earthing and ...

The purpose of this Recommendation is to give detailed guidance on protection procedures, so that an engineer who is not a lightning protection expert can accomplish the design of the lightning ...
