

Communication base station plus charging pile

Overview

Equipped with intelligent system management and a long-life backup battery for up to 3500 cycles, this station is designed to meet extreme outdoor conditions at IP55 protection, temperature-controlled air systems, and resistance to salt spray up to 500 hours. Legal status (The legal status is an assumption and is not a legal conclusion. Google has not performed a legal analysis and makes no representation as to the accuracy of the status listed. 2 Lithium Batteries (LiFePO₄): The Industry Transition Lithium iron. Energy storage systems can utilize renewable energy sources such as solar power for charging and release stored energy during peak demand periods, improving energy efficiency. However, traditional charging piles generally face three major pain. Simply put, a base station (BS) is a wireless transceiver device in a mobile communication network that provides wireless coverage and communicates with mobile terminals like your phone.
