

# Condensation in the energy storage battery compartment

## Overview

---

Have you ever wondered how moisture forms inside sealed battery enclosures?

Condensation in battery cabinets causes 23% of premature lithium-ion failures according to 2023 TÜV Rheinland data. Why does this persistent issue plague even modern battery systems, and what can engineers do. Have you ever wondered why battery cabinets in energy storage power stations suddenly develop performance issues?

The silent culprit might be condensed water - an often overlooked but critical challenge in battery thermal management. Condensation can then gather and result in corrosion or electrical shorts. For engineers and procurement managers sourcing batteries for heavy-duty applications, understanding and mitigating condensation is. The changing environmental condition in daily use may cause water condensation in the housing of the battery system.

## Condensation in the energy storage battery compartment

---

### Condensation

Any vapour in a battery pack enclosure has the ability to condense if there is a change in a surface temperature. Condensation can then gather and result in corrosion or electrical shorts.
