

Container communication high voltage power generation

Overview

A high-voltage shore connection system enables large vessels, like container ships or cruise liners, to draw power from the shore grid. This replaces the need for onboard generators while in port, improving the shore power supply. This scenario of the application of onshore power supply is also known. Purpose: to reduce at-berth emissions and associated health impacts from diesel auxiliary engines on-board vessels calling the ports. We help our customers, partners and equipment manufacturers to improve energy efficiency, asset reliability, productivity, safety and performance. The landside HVSC system constructed at the Port of Los.
