

Cuba engages in new energy battery storage

Overview

On Saturday, Cuba initiated the installation of solar energy storage batteries at four electrical substations, marking a significant step in addressing its energy challenges. These Battery Energy Storage Systems (BESS), also referred to as "concentrator units," are being placed at Cueto 220, Bayamo. Cuba installs batteries in substations to improve the use of solar energy and address the energy crisis. Despite these advancements, power outages persist due to the lack of capacity in the electrical system. In the short term, the investment project consists of installing 1,000 MW of solar photovoltaic energy by 2025, distributed across 46 solar parks throughout the country. These photovoltaic parks are part of a plan presented by the Cuban Ministry of Energy and Mines (Minem) in March 2024, which proposes the installation of a total of 92 photovoltaic parks by 2028, with a total installed capacity of 2,000 MW (Figure 1). This article explores its technical innovations, environmental impact, and how it addresses the challenges of renewable energy. What is the scope of the Cuban solar project?

The Cuban government's plan is to install 55 solar parks similar to the one in Cotorro by 2025.

Cuba's Energy Storage Crossroads: Balancing Renewables and Grid

You'd think an island blessed with year-round sunshine would've cracked the code on renewable energy storage. Yet Cuba's power outages increased by 23% in 2023 despite adding 450MW solar capacity.
