

# Current status of trough solar thermal power generation

## Overview

---

Parabolic trough technology is currently the lowest-cost CSP option for electricity production; however, unsubsidized electricity from troughs still costs about twice that from conventional sources. DOE funds solar research and development (R&D) in parabolic trough systems as one of four concentrating solar power (CSP) technologies aiming to meet the goals of the SunShot Initiative. This review provides a comprehensive analysis of various solar. The world's largest CSP plant, Noor Energy 1 in the United Arab Emirates, added 400 MW in 2023, bringing the total global CSP installed capacity to 6. Wang Y, Zhang C, Zhang Y, Huang X.

## Current status of trough solar thermal power generation

---

### Solar Trough Plant

Since 2007 when interest in solar thermal technology resumed, around 30 commercial solar trough plants have been built. The majority of these plants are either in Spain or the United States, with a ...
