

Design of solar power generation system for signal base station of communication class

Overview

The communication base station installs solar panels outdoors, and adds MPPT solar controllers and other equipment in the computer room. The power generated by solar energy is used by the DC load of the base station computer room, and the insufficient power is supplemented by energy storage. This paper aims to address both the sustainability and environmental issues for cellular base stations in off-grid sites. For cellular network operators, decreasing the operational expenditures of the network and maintaining profitability are important issues. This article presents an overview of the state-of-the-art in the design and deployment of solar powered cellular base station of PV panels, batteries, an integrated power unit, and. At this juncture, the solar power supply system for communication base stations, with its unique advantages, is gradually emerging as an indispensable green guardian in the field of power and communication. In developing countries there are over 230,000 cellular base stations will be wind-powered or PV -powered by 2014 (Pande,2009; Akkucuk,2016). by 2014 e, operation and maintenance, and load power consumption. The output of this project was also estimated using Google SketchUp software and calculated with PV watts; The design of PV system was done with.

Design of solar power generation system for signal base station of

Design of PV System for Mobile Tele-Communication Tower

The proposed system will work on Solar system in which the power required to run the mobile Tele-communication tower will be directly taken from the solar system which is already DC in nature.
