

# Differences between photovoltaic panels A and B

## Overview

---

Solar panels are graded based on the quality of the cells used, their performance consistency, and visual or structural defects detected during production. Let's decode each. Differences between Class A and Class B photovoltaic panels: Color: The color within a group of Class A panels is consistent, while Class B panels are allowed to have slight color differences within the same group. V-shaped: Not allowed for Class A. For Class B, there should be less than 1 notch. Solar Panels Grades A, B, and C (Explained) - Solar Panel Installation, Mounting, Settings, and Repair. Let's cut through the industry jargon to reveal what truly separates A-grade and B-grade photovoltaic panels.

## Differences between photovoltaic panels A and B

---

### What are the differences between Class A and Class B photovoltaic panels

How to distinguish between Panel A and Panel B of photovoltaic panels? Generally, the conversion efficiency, fill factor and appearance of Class A are better than those of Class B.

### grade of solar cell

Grade B solar cells have visual defects and have a lower filling factor of the CVC characteristic: 0.4-0.7. Their price is usually a bit lower than that of the elements of Grade A.
