

# Does the solar inverter have a power supply

## Overview

---

Solar inverters may be classified into four broad types: 1., used in where the inverter draws its DC energy from batteries charged by photovoltaic arrays. Many stand-alone inverters also incorporate integral to replenish the battery from an AC source when available. Normally, these do not interface in any way with the utility gri.

### Solar Integration: Inverters and Grid Services Basics

In order to provide grid services, inverters need to have sources of power that they can control. This could be either generation, such as a solar panel that is currently producing electricity, or storage, ...

Solar Inverter Oversizing vs. Undersizing  
The solar process begins with sunshine, which causes a reaction within the solar panel. That reaction produces a DC. However, the newly created DC is not safe to use in the home until it passes through an inverter which turns it from DC to AC. See more on solarmagazine Wikipedia
