

# Does the solar inverter have arc extinguishing function

## Overview

---

The inverter is equipped with an integrated photovoltaic (PV) arc-fault circuit interrupter as required for PV systems by National Electrical Code® ANSI/NFPA 70 (NEC). This function can. Huawei Technologies Co. As of May 2020, such inverters have been employed in 54 countries, with a total of 25,000 units shipped globally. To. Solar photovoltaic (PV) systems operate at high voltages, making them susceptible to what are known as arc faults - dangerous electrical discharges caused by loose connections or damaged insulation. So as to protect the personal and property safety of users. 5 seconds indicating that an arc fault has been detected.

## How does SolaX prevent the arcing

## of the DC side of the inverter from

When an arc is detected, the inverter stops running immediately and an error message is displayed within 2.5 seconds indicating that an arc fault has been detected.

## What is AFCI and why does it matter to your solar PV system?

Fires at traditional PV stations cannot be directly put out with water because of the high DC voltage, so installing PV inverters that are equipped with the arc fault detection function is a must.

## Does the photovoltaic inverter have an arc extinguishing function

The DC arc is the main cause of fire in photovoltaic (PV) systems. This is due to the fact that the DC arc lifespan of 10-15 years, but some models can last up to 20 years. Regular maintenance is essential to prolong their ...

## Arc-Fault Circuit Interruption (AFCI) Instructions

When an arc-fault is detected, the inverter will shut off, displaying an alarm code such as "AFCI Fault." If the occurrence is brief, the fault will auto-recover to minimize false trips.
