

Electric vehicle costs australia

Overview

The prices of electric cars in Australia start from around \$30,000 for a basic model like the Hyundai Kona Electric, while high-end models like the Tesla Model X can cost upwards of \$150,000. You can also check EV savings against your current car. The calculator is fully adjustable. Note: Special EV electricity plans offer off-peak rates as low as \$0.08/kWh. The cost to buy an electric vehicle remains, understandably, the key barrier to electric car adoption. While new car 'affordability' depends on your personal circumstances, there is a growing list of new lower-cost EVs entering Australia that have increased competition and. In this comprehensive guide, we'll break down the cost factors of electric vehicles in Australia, including the initial purchase price, charging costs, and the impact of government subsidies. BYD has the most affordable EVs, but MG, GWM, Chery and other brands are not far behind. Whether you're after a family-friendly ride for suburban errands or a trusty companion for weekend.
