

# Electricity generation belgrade

## Overview

---

In 2022 Serbia's national electricity generation came nearly 68% from fossil fuels, mainly coal, about 28% from hydropower, and a small percentage – from wind and solar. Serbia is fully self-sufficient in electricity and exports some of the domestically produced electricity. Clean, low-carbon energy sources account for almost 29% of the country's electricity, with. The Serbian energy sector is faced with fundamental structural changes that are conditioned by both global and national circumstances, as well as economic, technological, and environmental factors and accepted development goals, both national and international. The energy system of the Republic of Serbia is undergoing a major transformation. Electricity market coupling with neighbors in the European Union is a major factor in the EU integration of Energy Community contracting parties, including the Western Balkans, alongside deeper coordination within the region, the establishment of energy interconnections, investments in renewables.
