

Energy Storage Industry Health Project

Energy Storage Industry Health Project

The Future of Energy Storage , MIT Energy Initiative

Storage Enables Deep Decarbonization of Electricity Systems
Recognize Tradeoffs Between "Zero" and "Net-Zero" Emissions
Invest in Analytical Resources and Regulatory Agency Staff
Long-Duration Storage Needs Federal Support
Reward Consumers For More Flexible Electricity Use
Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible. See more on energy.mit.edu/epri [PDF]

EPRI's Energy Storage Roadmap, Vision for 2025

Reliability - Operational project experience is small but growing and energy storage system performance is advancing. Economics - Costs are decreasing, and operational value is better ...
