

# Energy independence panama

## Overview

---

Panama's National Energy Plan 2015–2050 outlines long-term strategy for the country's energy sector development, including renewables. The Plan established that 15% of Panama's generation capacity will come from renewables by 2030 and 50% by 2050. Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. Some of these energy sources are used directly while most are transformed into fuels or. In July 2024, the administration of José Raúl Mulino took office with a commitment to expanded economic growth and employment opportunities in Panama. Indeed, with increasing climatic events. ransition. This transition is driven by changes in consumer behaviour, the incorporation of modern and less polluting fuels, the reduction of electricity generation based on liquid fossil fuels in favour of natural gas and non-conventional renewable technologies, the development of electric. Citation: IRENA (2024), The energy sector of Panama: Climate change adaptation challenges, International Renewable Energy Agency, Abu Dhabi. The International Renewable Energy Agency (IRENA) serves as the principal platform for international co-operation; a centre of excellence; a repository of. UAC country deep-dive reports are produced to serve as reference material to accelerate last -mile access. Reports consist of 3 components: Overview of electrification in the country, including history, current status, geographic & demographic trends, and future plans. 1 toe (27% below Mexico's average), including 3 510 kWh of electricity (around 40% above Mexico's average).
