

# Energy storage box requirements for lithium battery charging

## Overview

---

By consolidating requirements, NFPA 855 provides a single, uniform framework that addresses: System design and construction requirements. Fire suppression and detection systems. Emergency operations and firefighter. Battery Energy Storage Systems, or BESS, help stabilize electrical grids by providing steady power flow despite fluctuations from inconsistent generation of renewable energy sources and other disruptions. The chapter covers the additional safety-related work practices necessary to practically safeguard employees against the. NFPA 855 gives key safety rules for lithium battery systems. NFPA. Batteries of the unsealed type shall be located in enclosures with outside vents or in well ventilated rooms and shall be arranged so as to prevent the escape of fumes, gases, or electrolyte spray into other areas. Store batteries at a temperature of 59°F (15°C).
