

Energy storage cabinet electricity cost per kilowatt- hour

2024 - 2025

Overview

On average, commercial and industrial energy storage systems cost between \$320 and \$480 per kilowatt-hour (system-level, installed). Medium projects (500 to 1,000 kWh): Approximately \$360 to \$440. In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are developed from an analysis of recent publications that include utility-scale storage costs. Whether you're planning a solar integration project or upgrading EV infrastructure, understanding. In 2023, lithium-ion batteries (the rockstars of energy storage) averaged \$139 per kWh, down from \$1,100 in 2010. Sounds impressive?

Well, gasps turn to grumbles when you realize electricity storage costs still account for 30-40% of renewable project budgets. That's cheaper than your morning latte per kilowatt-hour! ERCOT recently deployed a 1GWh zinc battery system - enough to power 200,000 homes during peak hours.

Cost Projections for Utility-Scale Battery Storage: 2025 Update

Figure ES-2 shows the overall capital cost for a 4-hour battery system based on those projections, with storage costs of \$147/kWh, \$243/kWh, and \$339/kWh in 2035 and \$108/kWh, \$178/kWh, and ...
