

# Energy storage equipment production

## Overview

---

Energy storage device production equipment forms the backbone of sustainable energy systems. Let's break down the key drivers: NLR research is investigating flexibility, recyclability, and manufacturing of materials and devices for energy storage, such as lithium-ion batteries as well as renewable energy alternatives. As of 2024, China's installed capacity of new energy storage projects has skyrocketed to 44.44 GW, a 40% jump from 2023 [2]. But what's driving this boom, and where's it headed?

Lithium-ion batteries currently. China sets "capacity price" floor for grid-scale storage, tying payments to coal benchmarks Beijing's new rule lets standalone storage earn fixed-cost payments for availability, not energy delivered. WEG secures funding for Brazilian battery manufacturing plant The new plant will increase WEG's.
