

# Energy storage power station sub-item cost

## Overview

---

The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr). Department of Energy's (DOE) Energy Storage Grand Challenge is a comprehensive program that seeks to accelerate. However, one crucial question remains: what does it really cost to build an energy storage power station, and what factors drive those costs?

This article takes a closer look at the construction cost structure of an energy storage system and the major elements that influence overall investment. The price is the expected installed capital cost of an energy storage system. Because the capital cost of these systems will vary depending on the power (kW) and energy (kWh) rating of the system, a range of system prices is provided. As of 2024, the global energy storage market has grown 40% year-over-year, with lithium-ion battery prices dropping like a post-Christmas sale – from \$1,400/kWh in 2010 to just \$89/kWh today [8].
