

# Eritrea solar energy

## Overview

---

Solar energy could provide a reliable and sustainable source of electricity for Eritrea, reducing its dependence on fossil fuels and helping to mitigate the impacts of climate change. This ambitious goal is a key component of the African Development Bank's Desert-to-Power Initiative, a plan re-emphasized during the Africa. Eritrea has embarked on an ambitious renewable-energy programme aimed at tackling long-standing power shortages, promoting industrial growth, and ensuring sustainable development across the country. The initiative includes large-scale solar farms in the Southern and Northern Red Sea regions, wind. Energy in Eritrea is an industry lacking in natural resources, though it has plenty of potential. [1] In 2019, some off-the-grid community systems rely on a combination of solar power, diesel. The Sahel region, long known for its arid climate and harsh living conditions, is set to become a beacon of renewable energy transformation through the Desert to Power (DtP) initiative. Credit: UNDP Eritrea Wind and solar some of the most affordable renewable alternatives readily available.

### Energy in Eritrea

Eritrea is developing building its sustainable energy capacity from such sources as wind and solar. Development of renewable energy sources helps give the country access to reliable energy and lower greenhouse gas emissions. The government of Eritrea built a wind energy pilot project in the city of Assab in the Southern Red Sea region in 2010 with the help of the United Nations Development Programme. The wind farm

has a capa...
