

Etap energy storage system

Overview

ETAP battery energy storage solution offers new application flexibility. It unlocks new business value across the energy value chain, from conventional power generation, transmission & distribution, and renewable power, to industrial and commercial sectors. The integration of Battery Energy Storage Systems (BESS) improves system reliability and performance, offers renewable smoothing, and in deregulated markets, increases profit margins of renewable farm owners and enables arbitrage. As solar and wind installations grow 23% year-over-year, we're sort of facing a paradox - more clean energy doesn't automatically mean better. It also provides energy measurement, real time simulation, advanced monitoring, quality control, intelligent load shedding, energy efficiency, and protection coordination. The paper also presents the best approaches for calculating the reliability improvements from optimal resource. Schneider Electric, a global energy technology leader, and ETAP, the industry and technology leader in power system design and operation, today announced a new physics-based digital twin solution to help utilities and critical infrastructure operators strengthen resilience and accelerate.
