

Europe imports solar power

Overview

In 2024, the EU imported €11.1 billion worth of solar panels, €2. A new report from SolarPower Europe and Fraunhofer ISE models how solar systems that support supply chain resilience can be competitive with imports from China. Solar PV is the fastest-growing and most cost-effective electricity source worldwide. 12)/W more than Chinese imports, but targeted policies could close the gap and help reach the EU's 30 GW annual manufacturing target by 2030. Producing a solar module in Europe with EU-made solar cells. Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade.
