

# Fire-fighting facilities for solar container communication stations and wind and solar power complementation

## Overview

---

These fire incidents raise alarms about the safety of battery energy storage systems, especially when co-located or interspersed with solar panels or wind turbines. These renewable power sources save on the use of conventional fuels such as petroleum and other fossil fuels, but they also introduce unfamiliar hazards should a fire occur. Control Fire Systems offers tailored fire suppression solutions that meet the unique demands of the renewable energy industry. Our priority is to avoid catastrophic consequences. This study developed a temperature-dependent fire risk assessment framework to provide timely warnings, resulting in an explosion.
