

Generators and substations are mutually invested

Overview

Electric companies are expected to make massive investments to modernize the grid to address growing electricity demand. Deloitte's analysis outlines strategies to help fund this growth. Annual spending by major utilities to produce and deliver electricity increased 12% from \$287 billion in 2003 to \$320 billion in 2023 as measured in real 2023 dollars, according to financial reports to the Federal Energy Regulatory Commission (FERC). Capital investment in electric infrastructure. Substations are the joints of the energy system, connecting the limbs of the transmission and distribution grids. While they often receive little attention and are viewed as an eyesore or bottleneck, Apricum believes they may be of growing appeal. The US power sector is expected to require substantial and sustained capital investments over the next two to. Substation-Sited Generation: A New Frontier for Utility Resilience and Flexibility Oops, something went wrong Skip to navigation Skip to main content Skip to right column News Today's news Canada Polls Politics World U. Weather Science & Tech Videos Lifestyle Shopping Gift Guide Health &.
