Overview

This updated SRM presents a clarified mission and vision, a strategic approach, and a path forward to achieving specific objectives that empower a self-sustaining energy storage ecosystem that develops, delivers, and deploys breakthrough solutions to meet a range of real-world. This updated SRM presents a clarified mission and vision, a strategic approach, and a path forward to achieving specific objectives that empower a self-sustaining energy storage ecosystem that develops, delivers, and deploys breakthrough solutions to meet a range of real-world. The Department of Energy's (DOE) Energy Storage Strategy and Roadmap (SRM) represents a significantly expanded strategic revision on the original ESGC 2020 Roadmap. This SRM outlines activities that implement the strategic objectives facilitating safe, beneficial and timely storage deployment;. A critical component of any grid energy storage system is the Battery Management System (BMS), which continuously monitors and regulates battery health at the cell and module levels. One Key Conclusion: Under all scenarios, dramatic growth in grid energy storage is the least cost option.
