

Hail hits solar photovoltaic panels

Overview

The short answer is that while hail can damage solar panels, modern solar technology is designed to withstand a range of weather conditions, including hail. Most solar panels are tested for durability and impact resistance, often rated to survive hailstones up to a certain size. In areas that have experienced very large hail (greater than 1 ¾" or 44 mm diameter), however, hail has caused significant damage to PV modules. Some measures can be taken to limit damage to. Hail damage is now the dominant solar insurance risk: Accounting for 54% of all solar loss claims at an average of \$58. Solar panels are designed to withstand harsh weather conditions, like high winds and heavy rain – but what about frozen balls of hail falling from the sky?

Luckily, severe hail storms aren't super common around the. The 2025 hail season is well underway across large swaths of the country. In June, two “Particularly Dangerous Situation” (PDS) Severe Thunderstorm Watches were issued across Texas, Oklahoma, and Kansas — an extremely rare occurrence, with the National Weather Service (NWS) issuing a PDS only 25. However, hail may not be nearly as lethal to solar panels as you might think since most solar panels are rated to withstand hailstorms. Hail damage is most likely in certain parts of the U.

Hail hits solar photovoltaic panels

Extreme Hail Storms Are Wrecking Solar Farms--but Defending

Solar developers and manufacturers have taken steps to reduce the risk from hailstorms, which involves a combination of sophisticated weather forecasting and panels that can turn to avoid
