

# Height of exhaust window in generator room

## Overview

---

How high should the ceiling be in a generator room?

For small to medium units, 3.5–13 ft) clears ducts, lights, and lifts. Large sets with overhead cranes or tall exhaust plenums benefit from 4–6 m (13–20 ft). Height also helps with heat stratification. from non-combustible materials. Clearance requirements help ensure the generator is operated at a safe distance where heat. 5 ft. from openings in walls (operable windows, doors, vents, window wells, or openings in the wall) to prevent Carbon Monoxide in the home. based on testing done by the Southwest Research. If your generator is expected to be in temperatures lower than -20 o F (-29 o C) consult the generator sets factory, a cold weather package may be required. Where strong prevailing winds are anticipated, face the engine end away from the wind. Typical Outside Small Generator Installation. Heat buildup is one of the most common causes of generator alarms and automatic shutdowns.
