

# Homemade mini solar power station

**51.2V 150AH, 7.68KWH**

## Overview

---

This guide will walk you through the steps to build your own solar power system, perfect for a small workshop, shed, RV, power lights, fans or as a backup power source in emergencies. This system is designed to be expandable, allowing you to increase capacity as your needs grow. Crafting your own solar generator is a practical way to harness renewable energy while gaining independence from the grid. This DIY project offers a cost-effective, customizable solution for various power needs, from camping trips to emergency home backup. However, store-bought models can cost \$500 to \$3,000+ and more. Building your own DIY power station saves money, lets you customize capacity and features, and teaches valuable skills. Do you have what it takes to make one yourself?

My family owns a cozy off-grid cabin in the hills, but since there's no electricity, I'd only stay there. Forget buying an over priced power station like a Jackery, Goal Zero, or other pre-built solar battery bank for your outdoor adventures. Instead, follow this guide and I'll make sure to answer all your questions about putting together your very own DIY power station. Let's get started by ordering the components: We will use a 12V 100Ah battery from LiTime (previously).
