

# How big a battery should I use for 10kW

## Overview

---

For a 10kW solar system, a storage capacity of about 10-15 kWh is recommended for lithium-ion batteries and 16-20 kWh for lead-acid batteries. This ensures adequate energy supply during low sunlight periods. What is this?

Calculation Formula: Use the formula “Battery Capacity (kWh) = Daily Energy Consumption (kWh)”. The first step in determining your battery size is to estimate how much energy your 10kW solar system generates each day. Solar systems produce different amounts of energy depending on factors like location, weather, and the number of sun hours available each day. As energy independence becomes increasingly important in 2025, understanding. For most homes, pairing that array with a 10 - 15 kWh battery soaks up evening demand and keeps bills low. Start by checking your smart-meter data: if you draw 12 kWh after 4 pm, aim for a 12-15 kWh battery.
