

# How big a photovoltaic panel should I use for 12 volts and 8 amps

## Overview

---

For most real-world setups, a good rule is: use 100–200W of solar to reliably charge a 12V battery (like a 12V 100Ah) if you want daily recharging, not just maintenance. For simple battery maintenance only, 10–30W is often enough. We cover everything from basic energy calculations to real-world factors like temperature and seasonal changes that affect performance. Plus, see why custom solar panels are ideal for challenging installations. The following table provides a clear and concise guide. Understanding these factors. Select the Right Wattage: For efficient charging, choose solar panels with sufficient wattage that generally meets or exceeds your 12-volt battery's needs, such as 100 watts for a 100Ah battery. The exact size depends on your daily energy use (Ah/Wh), available. This free DIY solar calculator makes it simple to estimate the size of your solar array, the number of panels, battery storage, and the inverter capacity you'll need.
