

How is the Berlin base station communication equipment

智慧能源储能系统
Intelligent energy storage system

Overview

Each radar dome contained massive 12-meter satellite antennas and the most sophisticated spying equipment for the time, enabling the US and British intelligence to intercept satellite signals, radio waves, microwave links and other transmissions. The communications systems of the German armed forces (Bundeswehr) include the strategic communication, information systems for the command and control of combined arms forces. It also covers military intelligence, weather forecasting, and aviation of all branches of the German armed forces. The listening station on top of Teufelsberg intercepted and analyzed. At first mobile listening units were deployed at Teufelsberg to listen into communications from Russian-controlled East Germany. In 1963, permanent structures were erected. In Germany this was. In 1985 the hard work of turncoat 'Paul' and lesser informers was melded with technical electronic intelligence gathering to produce a 69-page handbook for distribution to the highest echelons of Warsaw Pact leadership.
