

How many places are there for wind power generation

ESS

Overview

Favorable sites include the tops of smooth, rounded hills; open plains and water; and mountain gaps that funnel and intensify wind. Wind speeds are generally higher the greater the distance above the earth's surface. China is the largest producer of wind power in the world, having generated 466.1% of the nation's wind energy, more than double the amount from Iowa, the next. Good places for wind turbines are where the annual average wind speed is at least 9 miles per hour (mph)—or 4.8 m/s) for utility-scale turbines. Department of Energy Wind Energy Technologies Office's WINDEXchange website serves as a hub of wind data for large and small wind energy projects alike, including those offshore.

How many places are there for wind power generation

Wind Energy by State , February 2026 , Choose Energy

It's no surprise that Texas has the most wind turbines of any state since it is the country's frontrunner in wind energy generation. The Lone Star State has 19,393 active wind turbines, ...

Wind power by country

The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of the third millennium, and as of the end of 2023, it amounts to over 1000 GW. Since 2010, more than half of all new wind power was added outside the traditional markets of Europe and North America, mainly driven by the continuing boom in China and India. China alone had over 40% of the world's ca...
