

How many watts does ultra-high solar charging take

Overview

Using this example, you can see that it will take at least 100 watts of solar power to recharge a 100-amp hour battery in a few days. Also, keep in mind that it takes direct sunshine on the surface of the panel to produce the maximum-rated power of a solar panel. The Delta Pro and extra battery are each rated at 3600 watts storage. I've never been able to charge the two batteries to 100% and every 3-4 days use my generator to top them off. More often if I get cloudy/rainy weather. For the first time, EcoFlow introduces a product that gives you all the convenience of a traditional grid-tied solar panel system and. I read on one of Ecoflow's brochures that it is possible to charge a 6kwh battery in as little as 1 hour (I assume this is using the Max 5. 6K solar input)?

My question is does anyone have experience charging the unit from solar. If the remaining battery is less than 1% after you finish using the product, please. and if your considering another AIO for charging then just scrap the Ecoflow and just put in a normal AIO system that has real PV capabilities. (a 3kw Growatt will take 4500w PV) The original plan was to use the three Ecoflow components in my RV in the summer and transfer them to my house in the.
