

# How many watts of solar power are needed in the UK

## Overview

---

For most UK homes, a 4–5kW solar system is ideal. That's usually 8–13 solar panels, depending on their wattage (typically 350W–450W each). Here's a quick overview: A medium-sized household of up to four people typically uses around 2,700–3,500 kWh per year, which a 4–5kW system. More homeowners are switching to solar across the UK, with national statistics showing a total of 16.9 GW of solar capacity across 1,595,916 installations as of June 2024. Before making the switch, you first need to determine how many solar panels you need to power your house. First, determine your average daily energy consumption in kilowatt-hours (kWh). Next, consider the average peak sunlight hours in your area. - More specifically, in the UK, a one or two-bedroom home would require around 5 to 8 solar panels (if the panels are rated at 350W) or 4 to 6 solar panels (if the panels are rated at 450W). The answer depends on a few key things such as how much electricity you use, how much space you've got on your roof, and the type of panels you choose.
