

How much energy storage is equipped with new energy stations

Overview

, Septem— The U. energy storage market set a record for quarterly growth in Q2 2025, with 5.6 gigawatts (GW) of installations, according to the latest U. Energy Storage Monitor report released today by the American Clean Power Association. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest. GW = gigawatts; PV = photovoltaics; STEPS = Stated Policies Scenario; NZE = Net Zero Emissions by 2050 Scenario. Hydrogen electrolyzers are not included. Technological advancements in battery systems are enhancing the efficiency and capacity of. Houston/WASHINGTON, D. As we stand in 2025, the global energy landscape is rapidly transforming, with renewable sources like solar and wind power accounting for an increasingly larger share of electricity.
